

METHODS AND APPARATUS FOR PROVISION OF CENTRALIZED
CALLING INFORMATION AND FEATURES TO WIRELESS USERS

5

Abstract

Systems and techniques for providing calling information and features to a wireless telephone are described. A server hosting directory information and commands used to implement calling features establishes a packet data connection to a wireless device. The wireless device uses the packet data connection to locate and retrieve desired calling information 10 and commands. The calling information is used by the wireless device to initiate a voice connection to a telephone identified by the calling information. The commands are executed by the wireless device in order to implement calling features provided by the system in which the wireless device is used.
